

I would love to see some improvement in the relay section on sorensen vp100 they are slow to reply, we need faster answer time. What if there was an emergency we have no time to wait need a fast answer time. Also all equipments(Sorensen and D-Link) to work the same way for example: Phone number and IP address need to be the same all the time and never change. Also you need to add 911 on VRS.
